## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/17/2007 has been entered.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-10,12,13,16, and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Nishitake (JP 3-284443). Nishitake discloses a side impact protective apparatus that is incorporated into a side door 3 of a motor vehicle 1 comprising a gas source 13; a one-piece covering 11 including an upper edge side region 14, a lower edge side region, and a front face interconnecting the upper 14 and lower edge side regions; and a gas bag 12 that, when deployed, extends upward along an interior of the side door's window 4, wherein the upper side region 14 is connected to the lower side region along a connection line, as seen in figure 4, extending between spaced fastenings disposed at distances from longitudinal ends of the gas bag and adjacent a lower gas bag edge, and also wherein the connection line forms a pivot axis for the upper edge side region 14 of the covering 11 and said front face includes a weakening defined

therein. Regarding claims 7 and 12, several boreholes, which lie on a common, arch-like formed central line form the weakening on the front face.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 11 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nishitake in view of Tajima et al. Nishitake discloses the claimed invention except for an embedded net-like fabric insert that is provided inside a carrier element of the covering 30 at least adjoining the side impact protective apparatus 10. Tajima et al, however, teaches an air bag device with M an embedded fabric insert 125 formed by a woven cloth 125a with a lattice pattern. Therefore, it would have been obvious to one of ordinary skill in the art to have incorporated the net-like fabric insert 125 of Tajima et al into the side impact protective device 10 of Nishitake in order to easily and more controllably contain the undeployed gas bag.

***Response to Arguments***

6. Applicant's arguments with respect to claims 1-17 have been considered but are moot in view of the new ground(s) of rejection.
